

Speaker Termination Box (STB)

The MOVING iMAGE TECHNOLOGIES STB enclosures are designed for terminating and interfacing audio amplifiers to loudspeakers in a cinema. Large gauge terminal blocks are provided for all channel connections. Reliable bare wire connections provide secure contact without the use of crimp connections. STB enclosures can be shipped ahead to the job site to be incorporated into the audio system conduit layout. In retrofit upgrades the STB can be mounted in the narrow space between existing conduits to provide convenient access to your new B-Chain connections.

Features:

- Heavy, 16GA Steel Construction
- Durable Powder-Coat Finish.
- Tall, Narrow Footprint To Fit Between Other Conduits
- For Use In New Construction Or Retrofits
- Easily Identify All Of Your B-Chain Connections
- Reliable, Bare-wire Terminal Blocks for Secure Connections
- Supports Quad Amp, Stage Channels
- Convenient For Series And Paralleling Surround Speakers
- All Connection Points Labeled With Printed ID
